

Performance in motion

A close-up photograph of a technician wearing glasses and a dark blue long-sleeved shirt. He is focused on working on a complex electrical component, likely a Siemens contactor or relay, which is mounted on a metal panel. The component has several copper-colored terminals and a central mechanism. The technician is using a small black tool to adjust or inspect a part of the component. In the background, a computer monitor displays a software interface with various graphs and data points. The setting appears to be a professional workshop or laboratory.

Localised  
Maintenance, Repair  
& Overhaul services

A circular economy approach

# Extend the life of your assets with Unipart

## The power of localisation and sustainability

**Our Maintenance, Repair and Overhaul (MRO) solutions deliver an improved product lifecycle through a localised and sustainable approach to asset management.**

By leveraging our global network of local in-territory service centres, we extend asset lifecycles and mitigate risks through our manufacturing, engineering and innovative technology expertise.

This strategy for overseas OEMs ensures that critical rail assets are maintained within the territory.

Our specialised approach allows us to deliver a full suite of MRO services that are precisely tailored to your regional operational demands.

We don't just maintain, we future-proof your infrastructure by integrating bespoke upgrades including Condition-Based Monitoring and enhanced quality sub-components.

<b>Increased asset availability</b>	Reduce lead times and delays associated with international shipping.
<b>Enhanced sustainability</b>	Reduce Scope 3 emissions by minimising the distance assets travel for servicing.
<b>Ensured compliance</b>	Equipment is serviced, repaired and refurbished to meet specific local industry standards and safety regulations.
<b>Economic efficiency</b>	Assets can often be overhauled for less than the price of new, with warranties that meet or exceed those of new products.

## Our specialist solutions

We keep thousands of products running for global railways every day, restoring equipment to “as-new” condition.

Our expert capabilities breathe new life into a wide range of technology across multiple sectors.

Our UK and international capabilities include:

**Relay Service & Repair:** End-to-end servicing for over 24,000 relays annually, capturing a digital fingerprint for full traceability.

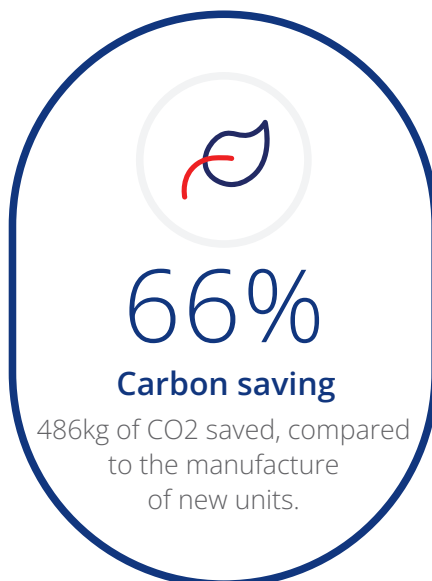

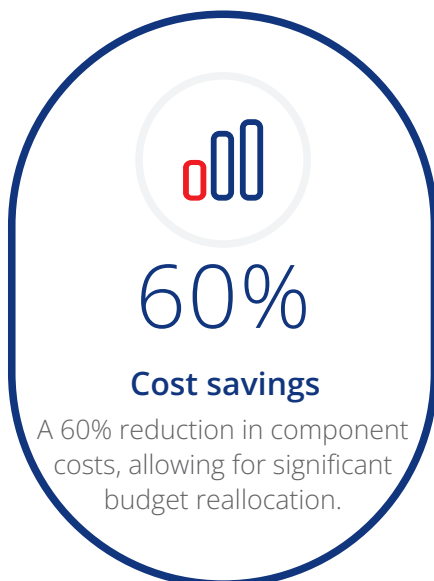

**Point Machine overhaul:** Extending asset life and helping you reach net zero through heavy maintenance and refurbishment.

**Bearings & Axle Boxes:** Expert refurbishment of 20,000 units per year.

**HVAC Services:** Specialised overhaul services.

**Token Block refurbishment:** Restoring and upgrading legacy equipment to meet current safety standards.

## The results achieved for one customer
